

Business Sales Performance Analytics

Data Science & Analytics – Task 1

Business Sales Performance Dashboard

Prepared by: Sravani Korlepara

Internship:

Future Interns – Data Science & Analytics Virtual Internship

Tools Used:

- Microsoft Power BI
- Microsoft Excel
- CSV Dataset

Dataset:

Superstore Sales Dataset

Submission Date:

30 June 2026

1. Project Overview

This project focuses on analysing business sales performance using the Superstore Sales dataset. The objective was to transform raw sales data into meaningful business insights through interactive dashboards and data visualization. The dashboard helps identify sales trends, profitable product categories, regional performance, and top-selling products to support better business decision-making.

2. Objectives

- Analyse business sales performance.
- Identify revenue trends over time.
- Determine the most profitable product categories.
- Compare regional sales performance.
- Identify top-selling products.
- Provide actionable business recommendations.

3. Dataset Description

Attribute	Description
Dataset	Superstore Sales Dataset
Records	Approximately 9,994
Fields	Sales, Profit, Category, Region, Product, Customer, Order Date, Quantity
Source	Kaggle

The Superstore Sales dataset represents historical retail transactions across multiple product categories and regions. It includes detailed information about sales, profit, customers, orders, shipping, and product performance. This dataset is widely used for learning business intelligence and sales analytics because it closely resembles real-world retail business data.

4. Dashboard Overview

The interactive dashboard provides a complete overview of business performance through KPIs, trend analysis, regional comparison, category analysis, and product performance. Users can filter the dashboard using Region, Category, and Order Date slicers.

5. Key Business Insights

Insight 1

Technology products generated the highest overall profit, indicating strong demand and healthy profit margins.

Insight 2

The West region recorded the highest sales among all regions, making it the strongest performing market.

Insight 3

Sales fluctuated over time with noticeable peaks during specific periods, indicating seasonal buying behavior.

Insight 4

A small number of products contributed significantly to total sales, highlighting the importance of best-selling products.

Insight 5

Furniture generated lower profit compared to Technology despite strong sales, suggesting opportunities to improve pricing or reduce costs.

6. Business Recommendations

- Increase inventory for top-selling products.
- Invest more marketing budget in high-performing regions.
- Improve pricing strategies for lower-profit categories.
- Plan promotional campaigns during peak sales seasons.
- Continue monitoring KPIs through interactive dashboards.

7. Conclusion

The Business Sales Performance Dashboard successfully transforms raw sales data into meaningful insights that support business decision-making. The dashboard enables stakeholders to monitor sales, profit, customer trends, and product performance in an interactive manner. This project demonstrates practical skills in data visualization, KPI analysis, business intelligence, and dashboard development using Microsoft Power BI.
